

INSTRUCTIONS

ADJUST AND FIT YOUR ETH CHEST VEST

1. Form a loose "X" with the left and right shoulder straps by connecting the **left** strap to the **right** cross-shoulder adjustment point and the **right** strap to the **left** cross-shoulder adjustment point.
2. Place the Chest Vest in the desired location against your chest and slip one shoulder strap over your head (like a sling).
3. Removed the slack from that shoulder strap by pulling the excess webbing through the plastic buckle at the cross-shoulder adjustment point until the Chest Vest is comfortably positioned against your chest.
4. Once you are satisfied with the comfort and location, remove the Chest Vest.
5. Adjust the other shoulder strap by pulling the excess webbing through the plastic buckle at the cross-shoulder adjustment point until its length equals the first shoulder strap.
6. Try in on to verify comfort and fit. Once you are satisfied, lock-off the running ends of each shoulder strap by routing them back through the plastic buckles. Fold and secure the excess webbing using the elastic retainer bands.
7. Adjust the waist strap until comfortable. Fold and secure the excess webbing using the elastic retailer band.
